

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

ARIA

-  [\[aria-*\]](#) attributes do not match their roles 
-  Elements with an ARIA [\[role\]](#) that require children to contain a specific [\[role\]](#) are missing some or all of those required children. 
-  Uses ARIA roles on incompatible elements 

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

NAMES AND LABELS

-  Buttons do not have an accessible name 
-  Links do not have a discernible name 
-  Image elements have [\[alt\]](#) attributes that are redundant text. 

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

CONTRAST

-  Background and foreground colors do not have a sufficient contrast ratio. 

These are opportunities to improve the legibility of your content.

TABLES AND LISTS

-  Lists do not contain only [](#) elements and script supporting elements ([<script>](#) and [<template>](#)). 

These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).
